

Piercing aftercare

Care for your newly pierced earlobes. Follow these instructions to support healing and help avoid complications.

6–8 WEEKS

Leave your earrings in for at least 6 weeks before changing them.

MATERIAL

Hypoallergenic and sterile, with a smooth-finish backing.

Pure 24K gold layers on stainless steel.

Nickel release in accordance with REACH, Annex XVII, entry 27.

DAILY CARE

Wash your hands well. Rotate the earring, clean the area with chlorhexidine once a day, and dry it thoroughly.

Check the backing after cleaning and before bed to make sure it is secure.

HELPFUL TIPS

Take care not to catch the earring on clothing or a hairbrush.

To remove the earrings, pull on both ends.

For the first 6 months, do not leave the earrings out for more than 24 hours, to help prevent the piercing from closing.

CONSULT A PROFESSIONAL

If you notice irritation, redness or an unpleasant smell, carefully repeat the aftercare routine.

If symptoms persist, consult a professional.
